

PRODUCT VISION / RELEASE 2.2.19

The closed-loop content intelligence system

Market Intelligence

Most LinkedIn tools schedule the content you bring them. Market Intelligence creates it from live research, publishes it, measures what performs, and makes the next cycle smarter.

● Measure

● Amplify

● Bridge to paid

● Optimize

THE IDEA

Every other tool schedules. Ours creates, then learns.

Buffer, Hootsuite, and Sprout Social time the content you give them. Market Intelligence runs the entire loop, so each cycle is smarter than the last.

- 1 Measure
- 2 Amplify
- 3 Bridge to paid
- 4 Optimize

Four phases, one compounding advantage

Phases 1 and 2 are live in release 2.2.19. Phases 3 and 4 are in active development.

The Closed-Loop Content Intelligence System

This is the strategic thesis. Every LinkedIn management tool on the market today is a **scheduling tool** — Buffer, Hootsuite, Sprout Social, Later. Your clients bring their own content. Those tools just time it.

Your platform already does what none of them do: it **creates** content from live research. With these scopes, you can close the loop entirely — measure what performs, learn from it, and let the next content cycle be smarter than the last. No other tool on the market does this end-to-end.

See exactly what your content does

Impressions

Comments

Shares

Shown exactly as LinkedIn reports them, and linked to the topic that produced each post.

Performance by topic

Which of your topics drive the most reach and engagement.

Best day and time

A day-and-hour heatmap of when your audience shows up.

Follower demographics

Who you reach, by industry, seniority, and geography.

Turn your team into a distribution engine

Organic reach on a company page is limited, often cited at only 2 to 5 percent of followers. Employee shares reach their full networks instead.

One post, every network

The same research, personalized for each team member.

Consent and control

Members opt in and approve every post in their name.

Example potential reach

25,000

50 team members, about 500 connections each

5 to 10x the reach of your company page followers alone

A publishing tool becomes a distribution engine.

Narrative summary

Advocacy Program Intelligence computed

First-party program analytics: the variant funnel, member behavior, gate outcomes, content uptake, and activated reach. Member-reported figures are self-entered from each member's own LinkedIn author view and are labeled as such; they are never API metrics.

Measure	Value
Variant Funnel	6 generated, 2 approved, 2 published (33% publish rate)
In Queue / Rejected / Failed	0 pending, 1 rejected, 2 failed a gate (unknown: 2)
Activated Reach	1,113 connections across 2 published post(s)
Member Reported self-reported	none reported yet

auth0|69c809a92adfb474: 2/6 published, edits 0%, avg decision 0h

Uptake by source post: post 401: 1/5 | post 388: 1/1

Your account generated [D2] 53 impressions and [D3] 3 clicks over the last 30 days, driven by [D1] 1 post with retrieved metrics. The single post focused on [D5] "AI as a Coding Partner," which accounted for [D6] all 53 impressions and generated [D4] 1 interaction.

Key Observation

The data is quite thin for drawing robust conclusions. With only one post tracked in this window, engagement metrics are limited. However, the 3 clicks against 53 impressions suggest room to test messaging that drives stronger action—consider experimenting with different calls-to-action or formats to improve the click-through rate on future "AI as a Coding Partner" content.

Window: 30 days. Data points cited: 7. Generated by anthropic/claude-haiku-4-5-20251001.

Posts

Values are exactly as LinkedIn returned them, shown with retrieval time. A post without a metrics row shows "not yet retrieved", never zeros.

Post	Topic	Impressions	Clicks	Likes	Comments	Shares	Retrieved
AI Code Review Bottleneck Impact on Team Dyna... 7/7/2026, 2:46:48 PM	AI as a Coding Partner	53	3	1	0	0	7/8/2026, 4:32:16 PM

Advocacy

Amplify workspace content through personal profiles. Your profile, your consent, your approvals.

My Participation

Connecting is your choice alone. In manual mode nothing publishes to your profile without your explicit approval of each post; auto mode exists only if you opt in yourself, and you can disconnect at any time.

Enabled	7/7/2026, 5:51:52 PM
Personal LinkedIn	connected
Consent	7/8/2026, 11:51:16 AM (version v1)
Mode	manual
First-degree connections	556

Disconnect Profile

Publishing mode

Manual: I approve every post

Auto: publish app

Performance by Topic computed

Aggregates computed by this platform from the stored LinkedIn values.

Topic	Measured posts	Impressions	Clicks	Interactions	Latest retrieval
AI as a Coding Partner	1	53	3	1	7/8/2026, 4:32:16 PM

Posting Time Heatmap computed

Average impressions by day of week and hour posted (measured posts only). Computed by this platform.

Put budget behind what already works

When an organic post outperforms, promoting it should be one click, not a rebuild in Campaign Manager.

Boost suggestions

A prompt when a post clears your threshold.

One-click sponsored

Promote a strong post without leaving the app.

AI ad copy variants

Ad angles from the same research pipeline.

One unified report

Organic and paid, side by side.

On the roadmap. The value: promote what is already proven, instead of guessing.

A platform that gets smarter every cycle

This is the moat. Performance data feeds the next cycle, so the platform improves on its own instead of standing still.

Smarter topic weighting

Results inform which topics come next.

Angle rotation tuning

Favor the angles that prove out.

Audience alignment

Match your content to who you reach.

Automated cadence

Frequency tunes to each account.

In development. The building blocks (topic weighting, quality scoring, and cadence controls) already ship today.

ALSO SHIPPED IN 2.2.19

Four more upgrades behind the loop

Publish as your brand

Publish as your personal profile or a company page you administer, switched live in the app.

Always-on delivery

Your LinkedIn connection refreshes itself, so scheduled posts stop failing overnight.

Choose your AI engine

Pick your provider and model, Claude, GPT, or Grok, and bring your own key.

More control over posts

Reschedule, edit anytime, or write a post from scratch with no AI in the loop.

Confidence, by design

Consent-first advocacy

Members opt in, approve each post, and can disconnect anytime. Credentials are encrypted and isolated.

Honest analytics

Real numbers only. No invented zeros, and AI summaries must cite your own data.

Stronger content defenses

Improved detection of hidden instructions buried in outside news and feeds.

Owner-only controls

Sensitive settings are enforced on the server, not just hidden in the interface.

THE LOOP, CLOSING

Research, generate, publish, measure, learn, and improve.

Available now

Organization Analytics and Employee Advocacy, live in 2.2.19.

Coming next

The Organic-to-Paid Bridge and Closed-Loop Optimization.

Market Intelligence

Built for people who have something to say.
